

User Guide

How to extend Page Component

By SBND Technologies

1) Create file ExtendedPages.cmp.php in root/cmp directory

2) Open file and create class ExtendedPages that extends class Pages located in root/cms/controllers/ Pages.cmp.php

```
1. <?php
2.  BASIC::init()-
   >imported('Pages.cmp', 'cms/controllers');
3.  class ExtendedPages extends Pages {
4.  }
```

3) Override method main() and declare component fields

```
1. function main(){
2.  parent::main();
3.
4.  /**
5.   * Add field 'author' after all fields from parent method
6.   *
7.   * view tutorial how to describe different type of fields
8.   */
9.  $this->setField('author', array(
10.      'text' => BASIC_LANGUAGE::init()->get('author')
11.  ));
12. }
```

4) Translate lingual variable "author"

Go to *Control Panel(cp) -> System -> Lanuages -> Language variables* (for the language you want to add the new strings to, default language is English)

- Click the Add button on the right
- fill in the Name field "author"
- fill in he Value field "Author"

5) Register component with system name "pages"

5.1) Go to *Control Panel(cp) -> System -> Components*

5.2) Add a component with the following values

- System Name: pages PHP
- Class Name: cmp/ExtendedPages
- Public Name: Extended Pages

Click Save.

6) Go to *Control Panel(cp) -> System -> Pages*

Open an existing page or create new. You will see the new field 'author' at the bottom.

The screenshot shows a form with a label 'Author' and a text input field containing 'Author home page'. Below the input field are two buttons: 'Update' and 'Back'.

7) Add value for the new field in the template for the client side.

Open root/themes/your_theme/tpl/base.tpl and find the following code:

```
1. <h1>${PAGE_DATA.title}</h1><br>
2. <div class="page_body">${PAGE_DATA.body}</div>
3. ${CONTENT}
```

Add \${PAGE_DATA.author} template variable:

```
1. <h1>${PAGE_DATA.title}</h1>
2. <div class="page_body">${PAGE_DATA.body}</div>
3. <h6>${PAGE_DATA.author}</h6>
4. ${CONTENT}
```
